# The Toppers

## LAB-PRAC-04\_COND

## The Toppers [10 marks]

---

### Problem Statement

You will be given the roll number and marks (out of 100) for three students in a format described below. The roll numbers **will not repeat** as well as **no two students will have the same marks**. All roll numbers and marks will be given **as positive integers**. You have to print the roll number of the students with the highest and the second highest marks. Both roll numbers should be on the same line, and be separated by a comma and a single space.

### Caution

1. Be careful about extra/missing lines and extra/missing spaces.
  2. Be careful that you have to output the roll numbers and not the marks.
- 

### INPUT:

(roll1, marks1) (roll2, marks2) (roll3, marks3)

### OUTPUT:

rollHighest, rollNextHighest

### EXAMPLE:

INPUT

OUTPUT:

---

### Grading Scheme:

Total marks: **[10 Points]**

There will be no partial grading in this question. An exact match will receive full marks whereas an incomplete match will receive 0 points. Please be careful of missing/extra spaces and missing/lines (take help of visible test cases). Each visible test case is worth 1 point and each hidden test case is worth 2 points. There are 2 visible and 4 hidden test cases.
