Neat Date Format

PRACTICE-03_TYPES

You are given a date in a slightly unusual format given below
[DD][MM][YYYY]
Moreover, the above uses a 4 digit format for the year (assume all years are between 1910 and 1999). However, you want to print the date a more compact format as
DD/MM/YY
Write a program to do so.

EXAMPLE:
INPUT
[12][5][1998]
OUTPUT
12/5/98
